

2MWh Cairo Solar Container for Agricultural Irrigation

Researchers, led by Mahmoud A. Abdelhamid from the Department of Agricultural Engineering at Ain Shams University, have developed a solar-powered smart irrigation system that ...

The newly introduced solar-powered irrigation system aims to reduce farmers' dependence on fossil fuels, lower production costs, and promote the use of clean energy in the ...

To achieve this, we propose a solar-powered irrigation system. This study considers alternative irrigation systems using photovoltaic solar systems to pump water from deep wells for ...

Solar-powered irrigation systems can be a game-changer for Egypt's agricultural sector. By converting sunlight into electrical energy, these systems power water pumps without depending ...

The project demonstrates that solar powered pumping has immense potential to enhance low carbon emission agriculture in Egypt. This will render local food systems more viable and climate ...

LZY Energy photovoltaic water pumping system delivers efficient, automated, diesel-free irrigation in remote areas. This low-voltage power distribution enclosure is designed to provide safe management ...

The desert farm at the outskirts of Cairo has implemented a central solar powered irrigation system with four pumps (288 kW) and a fuel saver system. The pumps reach 180 meters deep.

Egypt was selected as the project location due to the favourable geographical and climatic conditions, making it ideal for harnessing solar energy to support sustainable water irrigation.

Learn how a hybrid solar pumping system with battery storage is improving irrigation for Egyptian farmers, providing a reliable water supply even at night or on cloudy days while reducing ...

At SolarNile, we provide cutting-edge solar pump systems designed specifically for Egypt's agricultural landscape. Our innovative solutions harness abundant sunlight to deliver efficient, eco-friendly water ...
