

300wh power station in China in Brasilia

It will transport new energy sources such as wind power and solar energy in northeastern Brazil to regions near the capital Brasilia, providing stable electricity for about 12 million people. The ...

The project's primary goal is to transmit significant amounts of power from Brazil's abundant hydroelectric resources to China. This initiative actively promotes sustainable development.

Leveraging China's UHV DC transmission technology, the project is expected to significantly enhance the consumption of clean energy in north ...

It is the largest power transmission concession project and the largest infrastructure construction project in Brazil in recent years. State Grid won the bid for the project on Dec 15, 2023, ...

The project includes 800-kV UHVDC transmission lines, converter stations at both ends, and 500-kV AC support infrastructure. It is the third ...

The CTECHI GT300 Portable Power Station delivers an efficient and reliable energy solution for outdoor adventures, home use, and ...

UHVDC technology, extensively deployed in China, is gaining momentum globally as a high-capacity, long-distance solution for energy ...

The 1,468-kilometer-long project will deliver wind and solar energy from northeastern Brazil to the vicinity of the capital Brasilia, providing stable ...

In December 2023, State Grid Corporation of China secured the project as the sole successful bidder.

Portable power station is used as a AC power bank, but with ...
