

Researchers have pioneered solar-powered smart clothing, a groundbreaking system featuring a flexible solar cell and electronic components. This innovation transforms clothing into a ...

Discover how solar-powered wearable technology is redefining comfort in extreme climates. Imagine hiking across Iceland's glaciers while your jacket actively regulates your body temperature using ...

In a recent study, scientists have developed innovative solar-powered clothing by combining a flexible solar cell with an electrocaloric device.

Discover air conditioning clothes with integrated fans and smart textiles for ultimate cooling. Perfect for summer workwear--lightweight, breathable, and designed with air-cooled ventilation technology.

This special clothes, or OPV-EC thermoregulatory clothing (OETC), can expand our "thermal comfort zone" and makes us feel comfortable at a wider range of temperatures--from 6.0 to 25.1 degrees ...

In a paper titled "Self-sustaining personal all-day thermoregulatory clothing using only sunlight" published in the journal Science, researchers describe how they created solar-powered ...

Chinese researchers have presented a novel idea for solar-powered apparel that can control the body temperature of the wearer. The idea, which was developed by Ziyuan Wang and ...

With the integration of lightweight fans, cooling fabrics, and smart designs, these garments offer a practical way to combat extreme heat.

A recent research article on Science highlights a groundbreaking development in the realm of intelligent thermoregulatory apparel--a self-sustaining, solar-powered garment designed to ...

Air conditioning clothing is designed to provide comfort in hot weather by utilizing advanced materials and technologies that help regulate body temperature. One of the primary benefits of air conditioning ...
