

How is electricity distributed in Brussels?

3. Distribution (Sibelga) From the Elia network (150,000 of 36,000 volts), the electricity is then fed into Sibelga 's high-voltage network via 46 supply substations spread throughout the Brussels region. The voltage of the electricity is reduced in these substations, so that it can be distributed safely.

What is Belgium's Electricity distribution system?

Belgium's distribution system is composed of medium- and low-voltage networks(below 30 kV) and serves the majority of electricity consumers,with 4 825 659 connection points in 2020. Belgium's municipalities have a legal monopoly on electricity and gas distribution and own the electricity and gas distribution networks.

How much electricity does Belgium produce?

Like in the rest of Belgium,electricity in Brussels is produced from a variety of energy sources,including nuclear,gas,wind and solar. In 2023,Belgium produced around 76,000 GWh,28.2% of which came from renewable energy sources. In the Brussels Region,electricity consumption amounted to 3,823 GWh in 2023. 2.

Transport (Elia)
