

Producers of inverters, crucial components for connecting solar panels to the grid, are teaming up outside established European industry lobbying structures in a new challenge to China's...

A key factor that complicated matters was the US's 2022 ban on panels with components from China's Xinjiang region. The move aimed at ruling out forced labour, but caused equipment to ...

Installed solar photovoltaic (PV) capacities are experiencing an unprecedented increase in Europe: in two years, they have been multiplied by two with 60 GW added in 2023. However, local solar PV ...

The U.S. and Europe have become increasingly concerned about their dependence on Chinese solar panels, and other forms of renewable energy products, including EV batteries and ...

A report by SolarPower Europe and Fraunhofer ISE finds EU-made solar modules cost EUR0.103 (\$0.12)/W more than Chinese imports, but targeted policies could close the gap and help ...

While China's dominance of solar manufacturing is undisputed, a growing chorus of investors, innovators, and policymakers believes Europe can still rebound--if it acts decisively.

There has been little light relief for European manufacturers of solar panels over the past few years. A glut of cheap Chinese solar panels triggered a flurry of factory closures,...

A new report from SolarPower Europe and Fraunhofer ISE models how solar systems that support supply chain resilience can be competitive with imports from China.

Executive summary China currently dominates global solar PV supply chains Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China ...

The European Union's green transition is hampered by its dependence on China for solar photovoltaic panels. Despite efforts to reduce energy dependence, 98% of solar panel imports in ...

China-Europe solar panel components
