

Comprehensive data summaries, comparisons, analysis, and projections integrated across all energy sources. Monthly and yearly energy forecasts, analysis of energy topics, financial analysis, ...

On an average day, the Cuban government can meet only 50 to 70 percent of its country's electricity needs. On top of that, Cuba's entire grid has collapsed four times in the last six months.

Experts warn that there is little prospect of improvement in the near future. Power outages have become the top concern for Cubans, who struggle to preserve food, conduct banking ...

Official and up-to-date data of Cuba for all years of statistics, in an easy-to-read format. Analysis of consumer electricity prices with advanced tools for comparisons, trends, shares, and various metrics.

The reality for Cubans remains a life marked by energy uncertainty and the struggle to adapt to an increasingly precarious situation. This ongoing scenario highlights the significant ...

Among the "selected indicators" of the crisis, a standout is the 25% drop in national electricity generation during that period--a key factor behind the endless season of blackouts ...

Many Cubans fall back on bottled gas or wood fires when power is cut, while internet and communication services weaken further during outages. Businesses, particularly small ones, lose ...

Cuba faces a worsening energy crisis marked by daily blackouts, outdated infrastructure, fuel shortages, and increasing reliance on foreign aid and investment to modernize its grid.

Cuba has had several projects to increase electricity generation capacity that have not been executed successfully due to a number of factors such as lack of management skills, technical ...

This paper investigates whether peaks in energy deficits contribute meaningfully to volatility in Cuba's informal exchange rate. In other words, when electricity blackouts intensify, does ...
