What is a DC coupled Solar System?

DC Coupled systems keep things simple. In these systems, the electricity from your solar panels stays in DC form as it flows directly to charge your batteries. A charge controller, which can be a stand-alone component or housed within an inverter, is used to ensure that the batteries are charged efficiently without being overcharged.

Are DC-coupled solar energy systems more efficient?

DC-coupled solar energy systems have the advantage of being more efficient than AC-coupled systems. While solar electricity is converted between AC and DC three times in AC-coupled battery systems, DC systems convert electricity from solar panels only once, leading to higher efficiency.
