

Solar power is gaining momentum in Finland, and its role in our national energy mix will increase significantly in the coming years. Finland has substantial solar potential, and several ...

The first is an annual statistic covering operational solar power projects, while the second lists projects under construction and third lists . With this data, we provide a comprehensive view of the current ...

Finland's utility-scale solar capacity soared in 2025, adding a record 227 MW. The article covers major projects like Utajärvi, Europe's northernmost large-scale park in Simo, upcoming ...

The largest amount of solar radiation is in coastal areas and in southern Finland. However, industrial-scale solar power parks are also being developed in the north and inland areas.

The announcement of a massive, growing solar plant in Finland near the Arctic Circle will not only bring clean, reliable energy to the area on a huge scale but will also prove the viability of ...

Technological development, falling costs and climate goals have together accelerated the spread of solar power in Finland, although its location in the north poses its own challenges.

This solar park is equipped with over 206,000 solar panels on an east/west tracking system, making it the largest of its kind currently under construction in Finland.

Poised to be the largest solar installation in Finland and one of the largest in the world, this project aims to transform the region's energy landscape and contribute significantly to the ...

Finland's large-scale solar capacity more than doubled in 2025, buoyed by the commissioning of the country's first solar projects larger than 50 MW. Another record year for ground ...

The park will be one of the largest in Finland --marking it also one of the world's northernmost large-scale PV installations. The project, developed by Solarigo Systems Oy and ...
