

Increased renewable energy penetration argentina

In 2015, Argentina committed to having 20% of its energy matrix come from renewable sources by 2025, a goal that has driven the development of several projects across the country.

Against the background of a difficult legacy of macroeconomic imbalances, Argentina has embarked on an ambitious and unprecedented reform process to stabilise the economy.

Faced with the urgent challenge of climate change, Argentina needs to transform its energy matrix to use renewable sources. The energy transition (ET), focused on adopting clean ...

Argentina's vast solar, wind, and hydroelectric renewable energy potential, give it the possibility to decarbonize its power sector and support its COP26 goal of increasing the share of ...

Alongside other LAC countries, Argentina holds high potential for competitive green hydrogen production, mainly driven by the possibility of low renewable electricity costs, for example in the ...

Renewable energy sources are forecast to account for 55% of the total electricity generation capacity in Argentina by 2035, compared with 37% in 2023, according to GlobalData's ...

To increase low-carbon electricity generation, Argentina should enhance its current wind energy capabilities, as wind is already a substantial component of its clean energy portfolio.

Last Sunday, Argentina marked a milestone in its energy transition: renewable sources supplied 44.28% of the national electricity demand. This is a new historical record in the country's ...

Back then, renewables other than hydro made up just 1.9% of Argentina's electricity generation. Since then, wind alone has grown from less than 1% to nearly 10%, and solar has grown ...

Several companies are investing in renewable energy projects; some of the major players in the renewable energy market include YPF, Genneia, Pampa Energia, Enel Green Power, and 360 Energy.
