

India's view on solar power

India has declared an ambitious target of 500 GW of renewable energy (RE) by 2030, comprising around 280-300 GW of solar energy alone. As ...

India is endowed with vast solar energy potential. About 5,000 trillion kWh per year energy is incident over India's land area with most parts receiving 4-7 kWh per sqm per day. Solar photovoltaic power ...

India's long-term goal is to achieve 280 GW of solar capacity by 2030, making solar the main contributor to its renewable energy portfolio. India's renewable energy ...

India's rapid progress in solar adoption is only the beginning. With supportive infrastructure, growing energy demand and increasing urgency to decarbonise, ...

OverviewHistorySolar potentialInstallations by regionInstallations by applicationConcentrated solar powerHybrid solar plantsSolar heatingSolar power in India is an essential source of renewable energy and electricity generation in India. Since the mid-2010s, India has increased its solar power significantly with the help of various government initiatives and rapid awareness about the importance of renewable energy and sustainability in the society. In order to decrease carbon dioxide emissions, reduce reliance on fossil fuels, with coal being th...

In July 2025, India's solar power capacity had increased by 4,000%, and the country's total renewable energy capacity reached 227 GW. Palli village in Jammu & Kashmir became a ...

Indeed, in 2023, India was the third-largest solar energy producer in the world, adding over 16.6 GW of new solar installations. This growth is driven ...

In a world battered by climate disasters, energy insecurity, and geopolitical fragmentation, India offers an audacious alternative: a solar ...

India's energy transition is one of the defining stories of the global clean energy narrative. As of late 2025, India's installed renewable energy capacity had crossed 250 GW, driven primarily by ...

India is in the middle of a major shift in how it generates electricity as solar installations continue to rise at a pace that has surprised even power sector planners.
