

# Insulation detection of high voltage energy storage system

What are the methods used for insulation monitoring in energy storage field?

Currently, the methods used for insulation monitoring in the energy storage field are mainly external resistance method and AC injection method. The AC current injection method generates a square wave signal which is then injected into the RC circuit between the HV line and the Protective Earth (PE) through an RC filter or transformer.

How to detect insulation resistance in a DC system?

Therefore, effective and timely insulation fault monitoring is critical to the safe operation of the system. Researchers have put forward various detection schemes for the insulation resistance detection of DC systems, which can be summarized as the direct measurement method, bridge balance method and signal injection method.
