

Intelligent Bulk Procurement of Energy Storage Containers for Ports

This study proposes a two-stage robust planning model of multiple types of energy storage systems in seaport-integrated energy systems to minimize the overall operation and ...

Hence, there exists a research gap concerning the automation of bulk cargo handling operations in ports. Thus, this study addresses the question of how to automate the dry bulk cargo...

-contained battery solution for large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a sin.

y storage system is a complete, self-contained battery solution for large-scale marine energy storage. The batteries and all control, interface, and auxiliary.

The contribution of this study mainly lies in its development of an integrated energy scheduling approach for sustainable ports, which addresses uncertain container demand, multi ...

This literature review aims to explore the latest research and technological progress of smart container port developments in three aspects: port data acquisition, intelligent and automation ...

Ensuring availability of these electrical resources to meet loads which are intermittent and uncertain is becoming a critical port function. It requires investment in multi-vector energy supply chains, energy ...

This open access book provides a detailed exploration of energy management in seaport integrated energy systems, highlighting their potential to replace conventional fuel-based energy usage and ...

For ports interested in electricity storage (for example, to reduce the peak load on their local distribution network) it is important to assess the different storage technologies available against their through ...

From the perspective of multi-energy and low-carbon economic operation in the ports, an optimal operation method of multi-source output in the ports based on the optimal carbon emission ...
