

New energy storage capacity doubles

Utility-scale battery storage in the United States is poised to more than double over the next two years and will close out 2026 at nearly 65 GW -- a rapid rise from 17 GW in the first quarter...

According to data released by the US Energy Information Administration (EIA) in January 2025, utility-scale battery energy storage capacity in the United States grew 66% in 2024, exceeding ...

The Energy Information Administration said cumulative solar installations are expected to double from 91 GW to 182 GW from the end of 2023 to the end of 2026. Meanwhile, battery energy ...

Total installed utility-scale energy storage capacity in the United States reached 137 GWh by the end of 2025. Commercial and industrial systems accounted for 19 GWh.

NEW REPORT: US adds 58GWh of new energy storage capacity in 2025, largest single year of new battery capacity on record Inaugural Report Demonstrates Critical Role Energy Storage ...

The U.S. energy storage industry achieved a record-breaking milestone in 2025, installing 57.6 gigawatt-hours of new capacity--the largest single-year addition of battery storage on record. ...

The U.S. energy storage industry installed a record-shattering 57.6 gigawatt-hours (GWh) of new capacity in 2025, the largest single year of new battery capacity additions on record. Despite ...

Battery storage. Developers plan to add 24 GW of utility-scale battery storage to the grid this year, compared with a record 15 GW added in 2025. U.S. battery storage capacity has grown ...

Standalone storage made up nearly 30 GWh of new capacity added in 2025, while storage paired with solar accounted for 20 GWh. The residential energy storage sector added 3.1 GWh in ...
