

What are the specifications of an inverter?

Some or all of the specifications usually appear on the inverter data sheet. Maximum AC output power This is the maximum power the inverter can supply to a load on a steady basis at a specified output voltage. The value is expressed in watts or kilowatts. Peak output power

Which PCU/Inverter should be used in a power plant?

IP-20(Minimum) for indoor. IP-65(Minimum) for outdoor. (a) Three phase PCU/inverters shall be used with each power plant system (10 kW and/or above) but in case of less than 10 kW single phase inverter can be used. (b) PCU/inverter shall be capable of complete automatic operation including wake-up, synchronization & shutdown.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller(MCU) family of devices to implement control of a grid connected inverter with output current control.

What makes a good inverter design?

High-efficiency, low THD, and intuitive software make this design attractive for engineers working on an inverter design for UPS and alternative energy applications such as PV inverters, grid storage, and micro grids. The hardware and software available with this reference design accelerate time to market.
