

# Off-grid pricing for data center energy storage cabinets in the United States

Are data centers outpacing grid capacity?

Surging electricity loads from data centers, electrification and manufacturing are outpacing grid capacity, prompting a shift toward customer-sited energy resources and capabilities to address data center energy demand.

Should data centers pay based on the energy grid?

Jonathan Koomey, a researcher in energy and information technology, concurs with the need for data centers to pay according to their usage of the energy grid. "The key point, in my view, is that highly profitable companies who impose costs on the grid with big new loads should pay the costs created by those new loads," Koomey told CNBC.

What happened to data center power costs in 2022?

In terms of power, the major data center markets saw a sharp rise in power costs from May through August 2022, before retreating later that fall.

Should data center operators rely on grid power?

Data center operators overwhelmingly prefer to rely on grid power, but heavily regulated electric utilities -- burdened by rising affordability pressures -- struggle to respond quickly to growth demands.
