

What is a DC test for a solar PV system?

This standard also describes DC testing of the PV system, which can also be used for periodic testing of the system. In the standard, the test is classified into categories 1 and 2 according to the size of the PV system. Category 1 applies to all solar PV generation systems.

Are PV modules safe if exposed to rain or dew?

To validate that the PV modules are safe when exposed to rain or dew, an insulation resistance test is done with the PV modules in a wet state. This is to record the effect of shading by obstacles. The international standard for testing, documenting, and maintaining grid-connected PV systems is IEC 62446-1.

What is a PV continuity test?

In the standard, the test is classified into categories 1 and 2 according to the size of the PV system. Category 1 applies to all solar PV generation systems. Category 2 applies for larger or more complex systems such as mega solar power plant. If the DC side has earthing, such as a frame or equipotential bonding, a continuity test is required.
