

What is Poland's electricity mix?

Poland's electricity mix includes 52% Coal, 14% Wind and 13% Gas. Low-carbon generation peaked in 2024.

What is the future of Poland's energy sector?

Coal dominates the power sector of Poland, where it is the largest source of greenhouse gas emissions and a major employer. While the country has experienced strong growth in renewable energy over the past decade, the future looks uncertain.

What percentage of Poland's electricity is generated from low-carbon sources?

30% of Poland's electricity was generated from low-carbon sources in 2024, below the global average of 41%. It was the 26th largest country by electricity demand. Poland's biggest source of clean electricity is wind (14%). Its share of wind and solar (23%) is above the global average (15%).

What percentage of Poland's electricity is generated by natural gas?

Historically, natural gas has played a limited role in Poland's power generation, comprising around 3% of total electricity output. However, according to the Energy Regulatory Office (URE), this share increased to approximately 10% by 2024.

Discover all statistics and data on Energy sector in Poland now on [statista](#) !

How much electricity does Poland generate each year? Like total energy, the amount of electricity a country generates in total is largely reflected by population size, as well as the average income of ...

Coal dominates the power sector of Poland, where it is the largest source of greenhouse gas emissions and a major employer. While the country has experienced strong growth in renewable ...

Challenges of the electricity mix in Poland - an analysis of the challenges faced by the Polish electricity system, including potential development scenarios, renewable energy sources, and ...

31% of Poland's electricity was generated from low-carbon sources in 2025, below the EU average of 71%. Poland's largest source of clean electricity is wind (14%), but the country has ...

Poland stands at a critical juncture in its energy transition, driven by the urgent need to replace coal-dependent generation while meeting rapidly growing electricity demand.

Electricity generation capacity in Poland in gigawatts (GW) or percentage, state at the end of the month, by source 12

Poland's electricity mix includes 52% Coal, 14% Wind and 13% Gas. Low-carbon generation peaked in 2024.

We identify the most important challenges facing the power sector in Poland and globally. We analyse how to

Poland electricity generation

safely and cost-effectively change the generation mix and how to plan the energy ...

Discover data on Electricity Generation: by Type of Fuel in Poland. Explore expert forecasts and historical data on economic indicators across 195+ countries.
