

How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

What is solar power & how does it work?

Solar power is a renewable source of energy that generates electricity directly from the energy harnessed from the sun. It functions on the principle of using photovoltaic cells in converting sunlight into DC electricity, which is then stored in batteries or inverted into AC electricity for either home or business applications.

What are the basics of solar energy technology?

Learn the basics of solar energy technology including solar radiation, photovoltaics (PV), concentrating solar-thermal power (CSP), grid integration, and soft costs.

How to generate thermal energy from solar energy?

The generation of thermal energy from solar can be realized using various solar reflecting collectors. Most of the technology works on the principle of reflection, radiation and convection or based on the thermosiphon effect. Sun is a gigantic star, with diameter of 1.4 million kilometer releasing electromagnetic energy of about  $3.8 \times 10^{20}$  MW.
