

# Recent energy storage solar construction conditions

All non-carbon energy sources--including solar, wind, nuclear, hydropower, and geothermal--represented 41% of capacity (excluding storage) and 40% of generation in 2024.

Chinese battery manufacturer EVE Energy has secured a contract with the Malaysian government to deploy an AC/DC integrated 36MWh solar-plus-storage system at Kuala Lumpur International Airport ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like California and Puerto Rico, and continued ITC access through ...

The U.S. has resumed permitting of solar and storage on federal land but developers face a lack of agency staff and uncertainty over tax credits.

Much of the reported delayed capacity occurs at projects that are in the late construction or testing phases just before they come online. These delays are typically only for a month or two.

What makes 2025 distinct is the overwhelming contribution from clean energy. More than 90 percent of planned additions will come from solar, wind, and battery storage, signaling a shift ...

Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the solar industry. Each presentation ...

Latest news on energy storage projects, BESS, capacity expansion, and regulatory updates across Europe, US & Canada, Latin America, and Asia Pacific. Discover how energy ...

Construction professionals face mounting pressure to integrate sophisticated energy storage systems while balancing cost constraints, spatial limitations, and evolving regulatory ...
