What is rooftop solar power?

Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power for your home or business.

Is rooftop solar a good investment?

Rooftop solar power represents one of the most impactful decisions homeowners can make for their finances, energy independence, and environmental impact. With 2025 bringing continued cost reductions, technological improvements, and strong federal incentives, the value proposition for rooftop solar has never been stronger.

How much power does a rooftop solar system generate?

Key findings reveal that households consume only 7-10 % of the PV capacity generated by fully covered rooftops, with 90 % available for grid export. Scaled implementation, such as in a 100-unit estate, can generate approximately 2.4 MW of electricity, creating microgrids to supply neighbouring communities.
