

Server racks with a depth of 1200mm are used in remote areas

How deep are server rack cabinets?

Depth is the least standardized of the various server cabinets. Height can be in rack units (U) and width at 19 inches, but depth requires more precise attention. That's why it is so crucial to know about the standard server rack cabinets depth range.

Should a server rack be a deep or a shallow rack?

For front to back airflow, deeper racks provide superior cable management and prevent cables from restricting airflow. If your servers exhaust heat from the sides, shallower racks may be adequate, but they compromise future scalability. Finally, plan ahead.

How high should a server rack be?

Server racks are typically around 7ft(2.1m) high, but taller options are available if you need to accommodate more servers. Depth: Server rack depth, meaning the distance between the front and back of the cabinet, can affect how large each server can be.

What is an extra deep server cabinet?

Extra-Deep Server Cabinet Accommodates 42U of Standard Rack Equipment This SmartRack® 42U rack enclosure is designed for network wiring closets, retail locations, classrooms, back offices and other areas with essential rack-mount IT equipment. It is 1200 millimeters deep and supports mounting of equipment up to 1050 millimeters deep.

Total depth server rack arrangements (1200mm or more) are suited best for enterprise and high density data center installations. They are provided with the best cable management ...

Lenovo 42U 1200 mm Deep Rack offerings are industry-standard 19-inch server cabinets that are designed for high availability server environments. They are optimized to help maximize floor ...
