

The cost of large-scale solar power plants

Are solar power plants cheaper than fossil fuels?

Yes. The cost of solar power plants has declined significantly in the past decade, making them one of the most cost-effective renewable energy sources. Many large-scale solar energy power plants now produce electricity at costs lower than fossil fuel alternatives.

Are large-scale solar photovoltaic plants cheaper than conventional power plants?

These results indicate that in future, power produced from large-scale solar photovoltaic plants will be cheaper than power produced from any conventional technology in large parts of Europe. The cost of electricity produced in conventional, large-scale power plants typically ranges between 5 and 10 ct/kWh.

How much does electricity cost in a large-scale power plant?

The cost of electricity produced in conventional, large-scale power plants typically ranges between 5 and 10 ct/kWh. Cost competitiveness will thus be achieved under optimal conditions before 2025 and full cost competitiveness even under non-optimal conditions by 2050 at the latest.
