

Togo protects solar-powered communication cabinet inverter and connects to the grid

For months, experts examining renewable energy equipment imported from China have been quietly finding rogue components in solar inverters and large batteries, two people familiar with the...

Unknown communication devices were found in Chinese-made solar inverters, batteries, EV chargers, and heat pumps. Experts say these rogue components could remotely shut down or damage U.S. ...

Those components could theoretically be used to turn off inverters remotely and destabilize the energy grid or potentially cause blackouts, according to the experts.

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected ...

Sources indicate these devices could pose serious security threats by allowing unauthorized access to the electricity grid, sparking fears of potential disruption or damage. Power inverters, essential for ...

Rogue components are found in Chinese-produced power inverters by U.S experts. Power inverters are used throughout the world to connect solar panels and wind turbines to electricity...

U.S. experts have allegedly found rogue communication devices, including cellular radios, in Chinese-made solar inverters and batteries over the past nine months.

This investigative article exposes the discovery of undocumented communication devices hidden in Chinese-made solar inverters, creating unprecedented vulnerabilities in global power grids.

While inverters are built to allow remote access for updates and maintenance, the utility companies that use them typically install firewalls to prevent direct communication back to China.

The devices raise security concerns because Chinese companies are required by law to cooperate with their government's intelligence agencies, giving those agencies control over Chinese ...
