

Its proximity to Argentina and Brazil make for relatively easy electricity trade between the countries, and in 2016 Uruguay began exporting excess wind power generation to neighboring Argentina. The two countries' state-operated utilities had previously sold electricity bilaterally, but the 2016 wind power sales marked the first Uruguayan-Argentine electricity trade between private companies. Meanwhile, along the Uruguayan border with Brazil, wind power projects are being approached through a binational partner...

Akuo structured its local Uruguayan subsidiary in 2008, focusing on the development, construction and operation of new projects in mainly wind, solar and lithium storage energy sectors.

The wind energy farm in Uruguay was inaugurated by the President of Brazil, Dilma Rousseff, and the President of Uruguay, Jose Mujica. This farm is the first of its kind joint venture between Brazil and ...

Located in a region with exceptionally favourable wind conditions, the project harnesses Uruguay's abundant natural resources to deliver reliable, low-emissions power to the national grid.

Uruguay, a global leader in renewable energy adoption, now hosts the groundbreaking Pezo City Wind Power Storage initiative. This project addresses a critical challenge: storing excess wind energy ...

Uruguay, a global leader in renewable energy adoption, recently introduced stricter regulations for energy storage systems. With 98% of its electricity already generated from wind, solar, and ...

The country already generates almost all of its power from renewable energy sources, with wind turbines contributing almost a third. Other relevant renewable power sources include hydro, ...

Its proximity to Argentina and Brazil make for relatively easy electricity trade between the countries, and in 2016 Uruguay began exporting excess wind power generation to neighboring Argentina.

Outreach to developers and investors led by utilities to address risk perception and share knowledge. Stakeholder dialogues for regional cooperation, which ultimately facilitated market ...

Despite this opening of the energy market to non-state entities, it still served as a de facto monopoly. In the same way Uruguay's abundance of wind and rivers proved fortuitous for energy ...

Uruguay built a power grid that runs 99% on renewables--at half the cost of fossil fuels. Here's how its bold energy overhaul became a global model.
