

Wind power storage cost

How much money does a wind-storage system make a year?

The annual revenue is 12.78 million US dollars. When integrating the energy storage plant, it stores the wind power when the electricity price is low, and releases it when the price is high. The total income of the wind-storage coupled system can be significantly increased.

How long does a wind energy storage plant last?

When the energy storage plant lifetime is of 10 years, and the cost is equal to or less than 300 \$/kWh, with the increased efficiencies of both charging and discharging processes, the installed storage capacity and the annual revenue of the wind-storage coupled system increase.

How energy storage combines with wind generation?

This study aims to clarify how the energy storage combines with wind generation and what benefits can be generated through the combination. According to the time of use electricity price, the energy storage system can store electricity when the price is low, and release it when the price is high.

What is the annual revenue of wind-storage coupled system?

The annual revenue of the wind-storage coupled system is 12.78 million dollars, which is the income of wind generation only sold to the grid or customer. With the decrease of energy storage plant cost and the increase of lifetime, the best storage capacity and the corresponding annual income of wind-storage coupled system increase.
