

Working principle of power emergency base station

How does a battery group work in a base station?

The equipment in base stations is usually supported by the utility grid, where the battery group is installed as the backup power. In case that the utility grid interrupts, the battery discharges to support the communication switching equipment during the period of the power outage.

Why are base stations important?

Base stations play a key role in 4G/5G communications, edge computing and vehicular network based applications. Their reliability and availability heavily depend on the electrical power supply, for such modules as transceivers, air conditioners, monitoring system are all power hungry.

Are battery energy storage systems reshaping the energy landscape?

As a transformative technology, Battery Energy Storage Systems (BESS) are reshaping the energy storage landscape. They enable the integration of renewable energy, enhance grid stability, and reduce operational costs, making them essential for sustainable energy infrastructure.

What is battery energy storage system (BESS)?

What is BESS? The Battery Energy Storage System (BESS) is an advanced technology that stores excess electrical energy in rechargeable batteries and releases it when required. As a smart energy storage solution, BESS is designed to replace diesel generators.
