

Aiming at the wind farm composed of permanent magnet direct-drive wind turbines, a reactive power optimization strategy with the objective function of minimizing network loss, voltage deviation and ...

He is currently working with the CTG Wuhan Science and Technology Innovation Park, Wuhan. His research interests include scheduling and control of grid-integrated renewable energy and energy ...

With a total installed capacity of 500 MW, it operates 65 wind turbines each rated at 7.7 MW, making it China's largest single-unit-capacity wind power project in a high-altitude region.

Research on transient reconfiguration and low voltage ride-through control for a doubly fed induction generator wind turbine with energy storage device Xia Junli

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

The low voltage ride-through (LVRT) capability of the doubly-fed induction generator (DFIG) significantly impacts upon the integration of wind power into the power grid.

LHASA, Jan. 3 (Xinhua) -- A large-scale wind power project, standing at an average altitude of 4,650 meters and with a total installed capacity of 100 megawatts, commenced operation on Monday in ...

Affiliations: [State Grid Anhui Electric Power Research Institute, Hefei, China].

This paper proposes a new hybrid frequency control strategy for doubly fed induction generator (DFIG)-based wind turbines (WTs) to simultaneously provide short-term and long-term ...

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

Yangwu Wind Power Generation
